Tenoretic (atenolol)	Nausea, fatigue, dizziness
Veneric	Diarrhea, muscle cramps, rash
Vasotec (lisinopril mesylate)	Chest pain, blurred vision, constipation or diarrhea, fever, nausea
Vasotec (lisinopril mesylate)	Muscle cramps, labored breathing, nausea, fluid retention
Wytenin (guanabenz acetate)	Headache, drowsiness, dizziness
Zestrin (lisinopril)	Constipation or diarrhea, chest pain, spasms, nausea
Zestrin (lisinopril)	Fatigue, headache, dizziness
Zestrin (lisinopril)	Labored breathing, abdominal and chest pain, nausea, decreased blood pressure

Antihypertensive drugs in pregnancy	
Amlodipine	2
Hydrochlorothiazide	2
Lisinopril	2
Nifedipine	2
Propranolol	2
Tenoretic	2
Valsartan	2

KIDS AND DRUGS: WARNING SIGNS

How can you tell if a teen is on drugs? Here are a few "red flags" to look for:

- Blood, energy and/or drastic changes in behavior
- Extreme sudden weight loss
- Dropping old friends and favorite activities
- A change in sleeping habits, such as suddenly sleeping all the time
- A change in grades and school performance
- Disregarded items of clothing, such as "420" t-shirts
- Sudden, heavy use of mouthwash, eye drops, or body spray

Keep in mind, though, that all kids go through phases. It's fairly normal for young people to change as they figure out who they are. Only in most cases, it's a sign of a problem if a group of friends doesn't mean that your teen is using drugs. If you notice your teen displaying several of these warning signs at once, though, it's time for a talk.

STARTING A CONVERSATION

Some parents have trouble talking to their teens about drugs. Here are a few tips for starting a conversation:

- Choose a good time. It's difficult to have a meaningful conversation when your teen is preoccupied with homework or video games, or when you've got to leave for work in five minutes. Find an opportunity to talk when you both have free time - or make time. Go to dinner or for a drive. Minimize distractions.
- All questions - and listen. Avoid lecturing or choosing one good friend your teen will like you best. Instead, ask questions and listen - really listen - to your teen's responses. Not sure what to ask? Try a few of these:
 - Has anyone ever offered you drugs? How did you respond?
 - Have you ever wanted to try drugs? Why or why not?
 - Do you ever feel pressured to use drugs?
 - Do you have any questions for me about drugs?

Don't take issues lightly. A story about a teen who died after smoking marijuana sounds unrealistic. Focus on the more realistic consequences of drug abuse, such as addiction, school and/or legal problems, and poor decisions (such as having unprotected sex or driving while high) instead.

Make your expectations clear. Tell your teen that you don't want them to use drugs - and explain the punishment and consequences that they'll face if you find out that they're using drugs.
